

O'REILLY®

Exam PL-300

Microsoft Power BI
Data Analyst Associate
Crash Course

Day 2

Presented by
Daniil Maslyuk

Recap of Day 1

Agenda for today

Covered yesterday:

- Segment 1: Prepare the data
- Segment 2: Model the data

Covered today:

- Segment 3: Model the data, continued
- Segment 4: Create reports
- Segment 5: Manage and secure Power BI
- Final tips for the exam

Model the data

Segment 3

- *Design and implement a data model (covered yesterday)*
- *Create model calculations by using DAX (covered yesterday)*
- Optimize model performance

Optimize model performance

Segment 3: Model the data

- Improve performance by identifying and removing unnecessary rows and columns
- Identify poorly performing measures, relationships, and visuals by using Performance Analyzer and DAX query view
- Improve performance by reducing granularity

Knowledge check: Question 1

Segment 3: Model the data

You need to create a relationship between Product and Product Category in your data model.

For every row in the Product Category Table, there's one or more rows in the Product table.

How should you configure the relationship?

- A. One-to-one from Product Category to Product
- B. One-to-many from Product Category to Product
- C. One-to-many from Product to Product Category
- D. Many-to-many from Product to Product Category

Knowledge check: Question 2

Segment 3: Model the data

You need to create a measure that returns the sales amount for the previous month.

Which two DAX functions should you use?

Each correct answer presents part of the solution.

- A. TOTALMTD
- B. DATEADD
- C. CLOSINGBALANCEMONTH
- D. CALCULATE

Knowledge check: Question 3

Segment 3: Model the data

You need to create a role-playing dimension to filter the Sales table by Invoice Date and Delivery Date separately.

Which DAX object should you use?

- A. Measure
- B. Calculated column
- C. Calculated table
- D. Calculation group

Visualize and analyze the data

Segment 4

- Create reports
- Enhance reports for usability and storytelling
- Identify patterns and trends

Create reports

Segment 4: Visualize and analyze the data

- Select an appropriate visual
- Format and configure visuals
- Create a narrative visual with Copilot
- Apply and customize a theme
- Apply conditional formatting
- Apply slicing and filtering
- Use Copilot to create a new report page
- Use Copilot to suggest content for a new report page
- Configure the report page
- Choose when to use a paginated report
- Create visual calculations by using DAX

Enhance reports for usability and storytelling (part 1)

Segment 4: Visualize and analyze the data

- Configure bookmarks
- Create custom tooltips
- Edit and configure interactions between visuals
- Configure navigation for a report
- Apply sorting to visuals
- Configure sync slicers
- Group and layer visuals by using the Selection pane

Enhance reports for usability and storytelling (part 2)

Segment 4: Visualize and analyze the data

- Configure drill through navigation
- Configure export settings
- Design reports for mobile devices
- Enable personalized visuals in a report
- Design and configure Power BI reports for accessibility
- Configure automatic page refresh

Identify patterns and trends

Segment 4: Visualize and analyze the data

- Use the Analyze feature in Power BI
- Use grouping, binning, and clustering
- Use AI visuals
- Use reference lines, error bars, and forecasting
- Detect outliers and anomalies
- Use Copilot to summarize the underlying semantic model

Knowledge check: Question 1

Segment 4: Visualize and analyze the data

You have a report with a column chart and a bar chart. Your report uses default interaction settings.

You need to edit interactions in such a way that when you select an item from the column chart, the bar chart only shows the relevant data.

You select Edit interactions. What do you need to do next?

- A. Select the bar chart and set the column chart interaction to None.
- B. Select the bar chart and set the column chart interaction to Filter.
- C. Select the column chart and set the bar chart interaction to None.
- D. Select the column chart and set the bar chart interaction to Filter.

Knowledge check: Question 2

Segment 4: Visualize and analyze the data

You have a column chart that shows Sales Amount by Product Category.

You need to see Quantity Sold when you hover over a column. Your solution must minimize manual effort.

What should you do?

- A. Add Quantity Sold as a secondary series
- B. Add Quantity Sold to the Tooltips field well
- C. Create a report page tooltip
- D. Add Quantity Sold to a new column chart

Knowledge check: Question 3

Segment 4: Visualize and analyze the data

You have a report with five pages.

You need to place a filter on all pages except for one. The filters should carry over between the four pages with the filter. Your solution must minimize the effort.

What should you do?

- A. Create a calculation group
- B. Use a report-level filter
- C. Use page-level filter
- D. Configure sync slicers

Manage and secure Power BI

Segment 5

- Create and manage workspaces and assets
- Secure and govern Power BI items

Create and manage workspaces and assets

Segment 5: Manage and secure Power BI

- Create and configure a workspace
- Configure and update a workspace app
- Publish, import, or update items in a workspace
- Create dashboards
- Choose a distribution method
- Configure subscriptions and data alerts
- Promote or certify Power BI content
- Identify when a gateway is required
- Configure a semantic model scheduled refresh

Secure and govern Power BI items

Segment 5: Manage and secure Power BI

- Assign workspace roles
- Configure item-level access
- Configure access to semantic models
- Implement row-level security roles
- Configure row-level security group membership
- Apply sensitivity labels

Knowledge check: Question 1

Segment 5: Manage and secure Power BI

Your semantic model connects to on-premises SQL Server database. You need to configure the semantic model to refresh daily.

Which two components do you need to include in your solution?

Each correct answer presents part of the solution.

- A. On-premises data gateway
- B. Aggregate tables
- C. Incremental refresh
- D. Refresh schedule

Knowledge check: Question 2

Segment 5: Manage and secure Power BI

Your semantic model connects to a data source that has its data updated every 15 minutes. Your company only uses Power BI Pro licenses.

You need to keep the semantic model as up-to-date as possible without changing the license configuration of the workspace. The solution must minimize manual effort.

What should you do?

- A. Configure scheduled refresh every 15 minutes
- B. Configure scheduled refresh every hour
- C. Configure scheduled refresh eight times a day
- D. Refresh the model manually every 15 minutes

Knowledge check: Question 3

Segment 5: Manage and secure Power BI

You have a workspace that contains several reports, semantic models, and dataflows.

You need to share report with users from Group A who need not see the dataflows. Your solution must minimize manual effort and optimize the user experience.

What should you do?

- A. Share each report with Group A
- B. Add Group A to the workspace as Viewers
- C. Create an app and share it with Group A
- D. Share reports with Group A from OneDrive

Final tips for the exam

- Take practice exam (available from the certification page on Microsoft Learn)

Practice for the exam

PRACTICE ASSESSMENT

Assess your knowledge

Practice assessments provide you with an overview of the style, wording, and difficulty of the questions you're likely to experience on the exam.

Through these assessments, you're able to assess your readiness, determine where additional preparation is needed, and fill knowledge gaps bringing you one step closer to the likelihood of passing your exam.

[Take the practice assessment](#)

- Practice the topics you're not familiar with
- Prepare your space for the exam before the exam 😊
- Good luck!

Thank you!

Please provide your course feedback
